

LiteGait System

The Lite Gait System is a gait training device that can be used over ground and a treadmill while simultaneously controlling weight-bearing to allow for improved alignment and development to balance reactions.

www.pediatricsunlimited.org

Functions of Lite Gait:

- **Allows for a controlled redirection of weight-bearing to improve postural alignment during static stance and ambulation.**
- **Supported suspension allows therapist to facilitate symmetric normalized gait patterns for improved motor learning.**
- **Controlled weight-bearing allows for improved patient confidence and provides a safe environment to work on sit to stand, balance, and gait without fear of falling.**

People with the following can benefit from LiteGait:

- **Spinal Cord & Orthopedic Injuries**
- **Traumatic Brain Injuries**
- **Muscular Dystrophy**
- **Cerebral palsy**
- **Developmental Delay**
- **Ataxia**
- **Down Syndrome**
- **Genetic Disorders**
